

PDU Control C-81

The **PDU (Power Distribution Unit) Control C-81** is the base unit of one system to monitor the remote M-1681 through web interface or SNMP. With enclosed mounting kit it can be mounted into a 19" server cabinet.

The PDU **Control C-81** has 8 outputs for compatible M-1681. Thereby up to 64 sockets can be partially monitored in connection with up to 8x M-1681.

Furthermore, the sensor module Sensor S-1 can be connected to monitor the temperature and the humidity through web interface.

For a functional operation the compatible M-1681 is necessary.
